**Subject:** *Updated Software for TCM Programming*
**Application:** *Nissan/Infiniti*
**Issue Date:** *January, 2017*

# RE5R05A
## Updated Software for TCM Programming

The latest J2534 software available from Nissan is now available and is confirmed to work with generic, aftermarket J2534 pass-thru devices for programming these modules. It is NERS (Nissan ECU Reprogramming Software) version 03.06 or higher. If you have an earlier version, you will need to delete that version, and download the latest.

Vehicle programming will require the use of the following:

- Validated J2534 pass thru device
- Nissan ECU Reprogramming Software package
- Personal computer running Windows XP (SP2 or later) or Windows 7, 64 bit
- Applicable programming file

You will need to go to the Nissan technical website, www.nissan-techinfo.com to purchase the NERS program, user's manual and program file access.

- NERS software for 12 months, present version #03.07.01 (as of November 8, 2016); $270 cost.
- NERS Operator Manual version 5.4; FREE
- Program file access; approximately $20 per download file

This software package will not only allow you to program the RE5R05A TCM's, but it will also allow you to program ECU's as well.

Programming does require attention to detail. On some applications, you will be prompted to choose the correct program from a list. This information can be obtained when purchasing a new module from the OEM dealership. It will be a part number that can be located by providing the parts department with the vehicle VIN number. It will be necessary for you to read and follow the download and set up instructions outlined in the free Operators Manual!
